## **PART II: Research, Teaching, and Clinical Contributions**

### **Research, Teaching and Clinical Contributions**

#### *OVERVIEW*

Dr. Griffin is a surgeon with the Jordan-Young Institute for Orthopaedic Surgery and Sports Medicine. Dr. Griffin was recruited to the Jordan-Young Institute and Eastern Virginia Medical School as a specialist in shoulder surgery and sports medicine. Dr. Griffin specializes in disorders of the shoulder, knee, and elbow. He treats patients with rotator cuff tears, ligament and cartilage injuries, and arthritis, and brings expertise in total and reverse shoulder replacement surgery, arthroscopy, biologic restoration and the treatment of complex and revision surgery. A particular interest of Dr. Griffin's is advanced arthroscopic surgery where minimally invasive techniques are used to restore damaged ligaments, joints, and bones. Dr. Griffin regularly teaches medical students and remains active in lecturing throughout the region and nationally on various research endeavors.

Dr. Griffin's clinical practice is based in Virginia Beach, Virginia with a referral network encompassing over 3 million patients across Virginia and North Carolina where he sees approximately 90 patients in the clinical setting and performs many shoulder, knee and elbow surgeries weekly.

#### *RESEARCH*

Dr. Griffin is recognized for his ongoing clinical and basic science work in his subspecialty. Graduating first in his class from medical school, Dr. Griffin completed a focused research curriculum and completed a body of work on growth factors and tissue regeneration to graduate with research distinction. He continued this body of work in clinical outcomes research focused on shoulder surgery and sports medicine at the University of Virginia. He continues to work on several projects in collaboration with his mentors at Rush University Medical Center and Midwest Orthopaedics.

He has ongoing biomechanical and clinical studies in the shoulder including shoulder instability, overhead throwers and biceps related problems, shoulder arthroplasty, and rotator cuff repair. Dr. Griffin and his research team are conducting ongoing evaluation of the effects of superior capsular reconstruction and other biologic interventions in the shoulder and sports medicine. One of his major focuses is on improving and measuring outcomes. He is interested in reducing complications after shoulder surgery, shoulder arthroplasty, arthroscopy and sports medicine.

Ongoing research projects include (1) optimal fixation of proximal biceps tenodesis, (2) comparison of open and arthroscopic instability surgery techniques, (3) outcomes after shoulder replacement surgery, (4) stemless shoulder arthroplasty, (5) glenoid version in shoulder instability and (6) biologic preservation in shoulder surgery and cartilage restoration. Previously, he has been involved in amniotic membrane transplant animal research for cartilage restoration and growth factor research.

#### *TEACHING*

Dr. Griffin has participated in numerous regional, national, and international educational programs on shoulder, arthroscopic surgery and sports medicine and has been a faculty instructor for courses and

arthroscopy skills for residents and surgeons. While at UVA, Dr. Griffin received both of the available prestigious hospital wide teaching awards and was the only orthopaedic surgery resident to receive this award for the entire hospital system. Dr. Griffin teaches medical students, mentors research efforts, and serves as a preceptor for high school, undergraduate and graduate students interested in pursuing careers in medicine or orthopaedics. Finally, Dr. Griffin remains actively involved in community education programs lecturing on sports and shoulder injuries. Dr. Griffin gives lectures to primary care physicians, and therapists regionally. Dr. Griffin is actively involved in several societies and lectures on various shoulder and sports medicine topics.

## **Report of Clinical Activities**

### **1. Description of clinical practice:**

Dr. Griffin's clinical practice is focused on the management of comprehensive shoulder problems, but also the knee and elbow. He was recruited specifically to enhance and develop the shoulder research, cartilage restoration and care at the Jordan-Young Institute and the research programs in collaboration with the Jordan Research Foundation and Eastern Virginia Medical School. Dr. Griffin has an academically-focused, private practice based at the Jordan-Young Institute in Virginia Beach, VA serving the greater Hampton-Roads/Tidewater area as well as patients traveling from North Carolina and the Eastern Shore. Through his fellowship and mentors at Rush University Medical Center and residency training at the University of Virginia, he remains at the forefront of collaborative research, academics and education.

### **2. Patient load:**

Dr. Griffin's typical week includes 2-3 clinical days and 2 to 3 operative days. In addition, Dr. Griffin's practice involves direct supervision and teaching. Dr. Griffin frequently sees patients with failed surgeries and complex disorders, due to the tertiary nature of his practice and due to his focus on a subspecialty area of orthopaedic surgery. Patients are frequently referred regionally for shoulder and sports medicine problems.

The average number of patients evaluated is approximately 90 per week. His practice encompasses all types of shoulder problems, including complex revision problems after failed surgery including failed shoulder arthroplasty. The Jordan-Young Institute in combination with Sentara Leigh Hospital not only serves as a regional referral center but also serves as a national and international referral center for patients with difficult shoulder, cartilage and joint related problems.
